PLANTING INFO

Tall fescue in general should be seeded at 6 to 8 pounds per 1,000 sq. ft. or 350 pounds per acre. Cover seed with no more than .25 inches of soil, taking care to establish good seed to soil contact. If possible, roll the planting area. Keep seeds moist throughout the establishment period — 28 to 32 days after planting or when grass blades reach about 3 inches. Optimum mowing height is 2 inches, but it can be mown higher or lower based on your maintenance practices. Turf should be ready for use in about 6 to 8 weeks. Low to moderate fertility should be applied throughout the year; 2-3 pounds of NPK appropriate for your growing area should be adequate.

THE PRIDE OF NEW GENETICS!

DESCRIPTION

Marrakech is a dark green Tall Fescue featuring a reduced vertical growth height. By reducing the height we have created a variety that requires less mowing than other varieties and can reduce the amount of clippings by as much as 30%! Marrakech exhibits rapid establishment, and improved germination even under cooler conditions. Excellent shade performance, quick spring green-up, and improved resistance to common foliar diseases makes Marrakech an excellent choice for a multitude of applications.

PERFORMANCE DATA

TURF QUALITY

Mean turfgrass quality ratings of tall fescue cultivars in the 2006 National Tall Fescue Test at Carbondale (Shade), IL 2009 data: 1-9 (LSD=1.8)

HONKY TONK (RAD-TF17)	7.8
MARRAKECH	7.3
WOLFPACK II (PST-5WMB)	7.0
FALCON IV	7.0
MUSTANG	6.4
FAITH (K06-WA)	6.2
LS 1200 (SC-1)	2.3

WEAR RECOVERY

Wear recovery of turfgrass selections in a low maintenance trial seedid in August 2008 at Adelphia, NJ 2010 data tall fescue only: 1-9 (LSD at 5% = 1.4)

DYNAMIC II	6.7
MARRAKECH	4.7
MUSTANG	4.3
FALCON IV	4.0
REGIMENT II	3.3

Seeding Rate: 12/in²

Production Phase

In Use

Marrakech tall fescue was designed for success featuring such as :

- SUPERIOR SALT TOLERANCE
- SOPHISTICATED DARK GREEN COLOR
- VERY SHADE TOLERANT
- ENDOPHYTE ENHANCED
- QUICK TO ESTABLISH
